, 903, 905, 913 Bellefonte Avenue **May Be At Increased Risk From Microbial Contamination.**

We routinely monitor the conditions in the distribution system. On April 26, 2016, we experienced a loss of positive water pressure due to main break. A loss of positive water pressure is a signal of the existence of conditions that could allow contamination to enter the distribution system through back-flow by back-pressure or back-siphonage. As a result, there is an increased chance that the water may contain disease-causing organisms.

What should I do?

DO NOT DRINK THE WATER WITHOUT BOILING IT FIRST. Bring all water to a rolling boil, let it boil for one minute, and let it cool before using; or use bottled water. You should use boiled or bottled water for drinking, making ice, washing dishes, brushing teeth, and food preparation until further notice.

Inadequately treated water may contain disease-causing organisms. These organisms include bacteria, viruses, and parasites, which can cause symptoms such as nausea, cramps, diarrhea, and associated headaches.

These symptoms, however, are not caused only by organisms in drinking water, but also by other factors. If you experience any of these symptoms and they persist, you may want to seek medical advice.

People with severely compromised immune systems, infants, and some elderly may be at increased risk. These people should seek advice about drinking water from their health care providers. General guidelines on ways to lessen the risk of infection by microbes are available from EPA's Safe Drinking Water Hotline at 1 (800) 426-4791.

What happened? What is being done?

A water main break occurred affecting your area. To repair this break, City staff must isolate the break and turn off water in the above effected area. Once the water main is repaired, and the line flushed, water service will be returned to the affected area. You must at that point boil your water as outlined above until you receive notice from the City.

We will inform you when all corrective actions have been completed and when you no longer need to boil your water.

For more information, please contact: Henry Cummings, Water Foreman

at (570) 295-5370

Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.
